

#### WASTE MANAGEMENT SYSTEM

## DRUM & IBC PROCESSING

Waste received from customers stored in drums or Intermediate Bulk Container (IBC) is extracted from the storage containers and forwarded for further treatment based on the type and volume of waste received. The used drums or IBCs are cleaned and washed using high pressure hot water and bio-friendly solvent. Once the cleaning process is completed, the drums, IBCs are inspected to ensure complete decontamination. Plastic drums and IBCs are cut up into smaller pieces and sent for recycling; whereas, the metal drums and the metal casings of IBCs are crushed and sent for recycling.

#### Additional information:

1. Metal IBC cage can either be scraped or reused.
2. Cleaned IBCs and drums can be scraped reuse and repurpose - reuse back for waste storage, material storage or a modified contaminated waste bin.

### Processing Method

- Waste received which are stored in drums or Intermediate Bulk Containers (IBCs) is extracted from storage containers and forwarded for further treatment based on type and volume of waste received.
- The used drums or IBCs are cleaned and washed using high pressure hot water and a bio-friendly solvent.
