

WASTE MANAGEMENT SYSTEM

INCINERATION TREATMENT

Incineration offers the most complete destruction for any waste type where the hazardous waste received is permanently converted to inert substances through thermal treatment, including waste paint, thinner, contaminated soil, and chemicals.

CIC's Waste Management Treatment Plant in Kuala Belait has the only rotary kiln incinerator in Brunei Darussalam. The incinerator consists of two chambers: the first chamber reaches temperatures of up to 800 degree Celsius whereas the second chamber reaches a maximum temperature of 1200 degree Celsius. Rotary incinerators are ideal for processing hazardous materials as they ensure even and complete combustion and therefore efficient disposal of hazardous waste.

Treatment Focus

- CIC's incineration treatment offers the most complete destruction for any hazardous waste type.
- CIC has the only rotary kiln incinerator in Brunei Darussalam.
- The process involves the combustion of organic substances contained in waste materials.
- Waste materials received are permanently converted to inert substances through thermal treatment.
- Rotary incinerators are ideal for processing hazardous materials ensuring even and complete combustion and efficient disposal of hazardous waste.
